

ELETTRONICA GMBH AND M3 SYSTEMS JOIN THEIR FORCES TO RELEASE CUTTING EDGE RF-BASED SIMULATION & TEST SOLUTIONS FOR SAT/GNSS APPLICATIONS

Elettronica GmbH, trustful supplier of RF-based solutions for test, evaluation, and training of Radar and Electronic Warfare (EW) systems of German and Dutch Armed Forces, and M3 Systems specialist in Navigation Systems in France and provider of GNSS test & measurement solutions for defense, space and transport, band together by combining their knowhow on RF test & evaluation to provide forefront solutions based on NI platforms and to develop a joint offer for the Aerospace & Defense market.

The collaboration aims at providing Aerospace and Defense customers with system testing capabilities that cover Radar, Communication and Navigation domains. Key contributing products will be M3 Systems StellaNGC simulator of GNSS signals and Elettronica's EW/Radar & COM simulation environment.

“German-French industrial collaboration has always been an outstanding source for innovation” states Elettronica GmbH Managing Director, Dr. Marcello Mariucci, adding that he strongly believes in a successful, evolutionary speed up of SAT T&E technologies by partnering among high-tech companies such as Elettronica GmbH and M3 Systems.

Ambitions seconded by M3 Systems CEO Marc Pollina that emphasizes on “the most vivid enthusiasm of his team in starting this adventure with an innovative and well-established Defense company such as Elettronica GmbH”. “We expect great benefits in terms of product development, product quality and project performance through this collaboration,” declared Marc Pollina while endorsing the Memorandum of Understanding between the two technologies providers.

ELETTRONICA GMBH, based in Meckenheim with a forty-year experience, is supplier of the Bundeswehr and of German Security Institutions providing them with national key technologies. The company provided solutions and services to European Armed Forces, Institutions and international industrial customers in the domains of EW Simulation & Test, Military Vehicle Integration, Integrated Logistics Support, and Homeland Security. Distinctive skills include project management and system engineering, development and production according to quality standard EN9100, platform integration and training.

M3 SYSTEMS, based next to Toulouse, France, the company, founded in 1999, is also present in Brussels with its sister company M3 Systems Belgium.

M3 Systems has contributed to the definition of innovative solutions supporting the R&D activities of national and European space agencies. Having been involved in the early definition of the European GNSS Galileo, the company has pursued its activities into the development of GNSS test equipment. Today, M3 Systems offers a complete portfolio of GNSS test solutions supporting innovation in the aerospace and transport domains, including the emergence of autonomous systems.
